Time zones were originated in several countries by railroad operators. Possible ISO week numbers are in the range 01 to 52. Look at the different format variations in the following figure. The first is that the earth rotates about its own axis once a day – or more accurately we call the time it takes for the earth to rotate a day. For example, incremental times can be directly compared:

Note the fill handle for the highlighted cell in the following figure. That is a situation in which you needed a weekly countdown.
