These are additional constraints on the query that are added by the query client to limit the result set. Application labeled across the top of Figure 1: Property extraction creates and improves metadata by identifying words and phrases of particular types.

By using Microsoft Business Connectivity Services, you can design and build. However, they also support change log crawls that can remove items that have been deleted since the last crawl. The SharePoint Server Search core results page offers a user-friendly and intuitive user interface. This approach also provides a cleaner integration with search user interface. also has great tooling support for connectors.
