Study and investigation under the supervision of a member of the faculty along lines of interest well advanced of and supported by the series courses. Principles governing the mechanics of a continuum.

Topics include load capacity calculations of interference fit connections. For the aerospace engineering and the mechanical engineering premedical programs, prescribed course work provides students with more focused development. Aerospace engineering is concerned with the science and technology of flight, and the design of air, land and sea vehicles for transportation and exploration. Summary Focusing on how a machine "feels" and behaves while operating, Machine Elements:
The process is expedited by previous decisions. Advanced analysis of aircraft engines.
