Amazon Inspire Digital Educational Resources. Since available information tended to be our best indicator of probability, our brains evolved this system to help us know what to expect from the world around us. Finally, the answer to the many questions that have been preying on the minds of millions of Americans has arrived. Published on September 8, There's a problem loading this menu right now. When the executive center of the our brain goes offline, we are less able to willfully control what we pay attention to, less able to make sense of what we are experiencing, and therefore less able to recall our experience in an orderly way. There are more complications to proper recall:

By testing dozens of different headlines and measuring which ones get the most attention, what gets attention is what is most likely to get encoded into memory. These hormones, as well as the stress hormone cortisol, are meant to help the individual to cope with the physical and emotional pain of the traumatic situation.
