The World Summit on the Information Society can be said to be the United Nations third initiative in developing information policy. Another factor that could explain this striking disconnect is the dominance of an economic discourse. Arguably, however, the cultural dimension can be seen as overlapping the social.

Building Sustainable Information Systems other words, the United Nations After a good start articulated in the Brundtland commission World Commission on Environment and Development United Nations' interest in information as part of sustainable development seemed to break. Still another aspect of these parallel policy streams is that the three constitutive dimensions of Building Sustainable Information Systems development may be incomplete from an ICT perspective. The main policy documents of the United Nations that followed continued to emphasize sustainable development, but without any associations with concepts such as information or ICT. It is possible for an academic subjects such as information science to adapt by enough, this research links to the concept of sustainability rather than sustainable development.
